OUTCOMES

What you will achieve

By the end of the Aiops course path, you will be able to:

1

Reduce noise and MTTR

Use anomaly detection and event correlation to turn alert storms into actionable incidents.

2

Automate incident response

Connect root cause analysis, runbooks, ChatOps and ITSM to remediate issues faster.

3

Run AIOps at scale

Design governed, self-healing operations backed by SLOs and scalable telemetry pipelines.

WHAT THE FOUNDATION LEVEL ADDS

AIOps concepts, telemetry and observability stack

Hands-on: Stand up an observability lab. Run Prometheus, Grafana and Loki with Docker Compose, collect metrics and logs from a demo app and spot an injected anomaly.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Aiops and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Aiops on real work.
- Leads and managers who want first-hand familiarity with Aiops.

BEFORE YOU START

- No prior Aiops experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION

Aiops Foundation Training agenda

10 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

DAY 1 — Foundation: AIOps concepts, telemetry and observability stack

New at this level

1. What AIOps is: applying analytics and machine learning to IT operations data to observe, engage and act
2. Operations pain points: alert storms, siloed tools, manual triage and rising MTTR
3. Telemetry types: metrics, logs, traces, events and topology data
4. Monitoring versus observability: known unknowns, high-cardinality data and service health
5. AIOps platform landscape: Dynatrace Davis, Splunk ITSI, Datadog Watchdog, BigPanda and ServiceNow
6. Machine learning for operations: anomaly detection, clustering, correlation and forecasting in plain terms
7. Key operations metrics: MTTD, MTTA, MTTR, alert volume and SLIs and SLOs
8. Lab environment: Prometheus, Grafana and Loki with Docker Compose
9. Collecting first data: node_exporter metrics, application logs and a demo microservice
10. First anomaly: building a Grafana dashboard and spotting an injected CPU or latency anomaly

PRACTICE

Hands-on labs

You build these yourself during the course, guided by the trainer.

FOUNDATION

Stand up an observability lab

Run Prometheus, Grafana and Loki with Docker Compose, collect metrics and logs from a demo app and spot an injected anomaly.
