1

### Deliver with GitOps

Deploy and reconcile Kubernetes applications from Git with Argo CD.

2

### Automate pipelines and releases

Build event-driven workflows and progressive canary and blue-green releases with Argo Workflows, Events and Rollouts.

3

### Operate Argo at scale

Run secure, highly available, multi-cluster Argo platforms with governance and observability.

WHAT THE FOUNDATION LEVEL ADDS

### GitOps concepts, Argo projects and installation

**Hands-on:** First GitOps deployment. Install Argo CD and Argo Workflows on kind, deploy an app from Git and run a hello-world workflow.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Argo and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Argo on real work.
- Leads and managers who want first-hand familiarity with Argo.

BEFORE YOU START

- No prior Argo experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.

2. GitOps principles: declarative, versioned, pulled automatically and continuously reconciled
3. Kubernetes prerequisites: kubectl, namespaces, Deployments, Services and custom resource definitions
4. Lab setup: a local kind or minikube cluster and a Git repository for manifests
5. Argo CD architecture: API server, repository server, application controller, Redis and ApplicationSet controller
6. Installing Argo CD: install manifests, initial admin password, argocd CLI login and UI access
7. First Argo CD Application: deploying the guestbook app from Git and reading sync and health status
8. Argo Workflows architecture: workflow controller, Argo Server, executor and workflow CRDs
9. Installing Argo Workflows: quick-start install, argo CLI and the web UI
10. First workflow: a hello-world container step submitted with argo submit and watched in the UI
