OUTCOMES

What you will achieve

By the end of the Continuous Deployment course path, you will be able to:

1

Design deployment pipelines

Build pipelines that move immutable artifacts safely from commit to production.

2

Release with low risk

Use blue-green, canary, feature flags, GitOps and automated analysis to deploy safely.

3

Scale continuous deployment

Govern, secure and continuously improve deployments across many services and teams.

WHAT THE FOUNDATION LEVEL ADDS

Deployment pipeline concepts and first deploy

Hands-on: Automate a first deployment. Build a pipeline that packages an application as a versioned artifact and deploys it automatically to a test server with a smoke test.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Continuous Deployment and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Continuous Deployment on real work.
- Leads and managers who want first-hand familiarity with Continuous Deployment.

BEFORE YOU START

- No prior Continuous Deployment experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION

Continuous Deployment Foundation Training agenda

10 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

DAY 1 — Foundation: Deployment pipeline concepts and first deploy

New at this level

1. Continuous integration, delivery and deployment: definitions and differences
2. Deployment pipeline: commit, build, test, release and deploy stages
3. Release and labeling strategies: versioning, tags and build promotion
4. Environments: dev, test, staging and production and environment parity
5. Artifacts: immutable builds, artifact repositories and container images
6. Deployment automation basics: scripts versus tools and idempotent deployments
7. Server preparation: provisioning targets and configuration management
8. Feedback loops: post-deploy monitoring and notifications
9. Culture: organizational buy-in and shared ownership of releases
10. First automated deployment: pipeline deploy to a test server

PRACTICE

Hands-on labs

You build these yourself during the course, guided by the trainer.

FOUNDATION

Automate a first deployment
