DevOpsSchool

Course curriculum · November 2026

LEVEL 02 OF 04 · ESSENTIAL

Docker Security Training Essential Training

Apply namespaces, cgroups, capabilities, seccomp and AppArmor controls to containers and add logging, monitoring and signed image pulls.

LIVE ONLINE **Max 8-10 hours**	CORPORATE (DAY-WISE) **2 days · Days 1-2**	SELF-PACED VIDEO **1-year LMS access**
BATCH SIZE **Max 10 learners**	NEXT BATCHES **1st of every month · weekends: first Saturday**	CERTIFICATE **Verifiable certificate of completion**

Foundation	Essential	Intermediate	Advanced
1 day · Included	2 days · This curriculum	3 days · Next step	5 days · Later

INSIDE THIS CURRICULUM

What you will achieve	Outcomes and level focus
Who should attend	Audience and prerequisites
Agenda	23 topics · Foundation to Essential
Hands-on labs	2 labs
Formats and fees	Live, 1:1, self-paced, corporate
Trainer and reviews	Rajesh Kumar
Enrolment	Batches, payment, contacts

WHY DEVOPSSCHOOL

- Rated 4.6 on Google
- 1,500+ verifiable certificates issued in the public registry
- Trainer Rajesh Kumar: 20 years in industry
- Small batches: max 10 learners, every session recorded

OUTCOMES

What you will achieve

By the end of the Docker Security Training course path, you will be able to:

1

Apply kernel-level controls

Use namespaces, cgroups, capabilities, seccomp, AppArmor and SELinux to isolate containers on a Docker host.

2

Build trusted, hardened images

Write secure Dockerfiles, scan and audit images, and pull only signed images from trusted registries.

3

Monitor and respond at runtime

Detect runtime threats with Falco and logging, and respond to container incidents with a repeatable process.

WHAT THE ESSENTIAL LEVEL ADDS

Host and runtime security controls

Hands-on: Lock down a running container. Run a web container with dropped capabilities, a custom seccomp profile, AppArmor, resource limits and a non-root user, then prove each control works.

WHO SHOULD ATTEND

- Learners who know the basics of Docker Security Training and want to use it confidently every day.
- Professionals taking over Docker Security Training work on a live project.
- Teams agreeing on a common way of working with Docker Security Training.

BEFORE YOU START

- The Foundation level, or equivalent hands-on experience.
- You can already: Explain the Docker security model, its kernel isolation features and the main risks, and check the security posture of a running host.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION TO ESSENTIAL

Docker Security Training Essential Training agenda

23 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

DAY 1 — Foundation: Docker security challenges and architecture

Included from Foundation

1. Understanding Docker security challenges: shared kernel, image supply chain, daemon privileges and container sprawl
2. Protecting your Docker containers: defence in depth across host, daemon, image, application runtime and code
3. Understanding Docker architecture: Docker daemon, CLI, containerd, runc and the Docker Registry from a security view
4. Kernel namespaces: pid, net, mnt, ipc, uts and user namespaces and the isolation each one provides
5. Control groups: CPU, memory, pids and block I/O controllers and how Docker applies them
6. Linux kernel capabilities (libcap): capsh and getpcaps, the default Docker capability set
7. SELinux, AppArmor and seccomp: mandatory access control and system call filtering in plain terms
8. Docker security levels: host and runtime security, application runtime security and code level security
9. Installing Docker securely: official repositories, package signature checks and the rootless install option
10. First posture checks: docker info security options, docker inspect for Privileged, CapAdd and SecurityOpt
11. Running in super privileged mode: what --privileged grants, device access and why to avoid it

DAY 2 — Essential: Host and runtime security controls

New at this level

12. Kernel namespaces and security aspects: user namespace remapping, risks of --pid=host and --ipc=host
13. Control groups and security aspects: limit resource utilization, manage memory and CPU usage with --memory, --cpus and --pids-limit
14. Docker daemon attack surface: root daemon, docker.sock permissions, remote API exposure and TLS on port 2376
15. Linux kernel capabilities and security: --cap-drop ALL, adding only what is needed, no-new-privileges
16. Seccomp security profiles for Docker: the default profile, custom JSON profiles and --security-opt seccomp
17. AppArmor security profiles for Docker: the docker-default profile and custom profiles loaded with apparmor_parser
18. Other kernel security features: SELinux labels with :z and :Z, masked and read-only /proc paths
19. Docker Content Trust signature verification: DOCKER_CONTENT_TRUST=1, signing and pulling signed tags
20. Docker Logging: logging drivers, log rotation and daemon events as an audit trail
21. Docker Monitoring: docker stats and docker events, cAdvisor and Prometheus metrics to spot abnormal behaviour
22. Container privileges: USER in images, --user at runtime and rootless Docker mode
23. Restart policy: set an on-failure container restart policy with a maximum retry count

PRACTICE

Hands-on labs

You build these yourself during the course, guided by the trainer.

FOUNDATION

Inspect container isolation on a host

Start containers with default and privileged settings, compare their namespaces, capabilities and security options, and record the differences.

ESSENTIAL

Lock down a running container

Run a web container with dropped capabilities, a custom seccomp profile, AppArmor, resource limits and a non-root user, then prove each control works.

HOW YOU CAN LEARN

Formats and fees

The same agenda in four formats. Fees are in Indian rupees as of November 2026; the course page shows them in your currency.

FORMAT	DURATION	WHAT YOU GET	FEE
Live & interactive (online)	Max 8-10 hours	Instructor-led public batch of max 10 learners with demos, labs, Q&A and assignment review. Weekday batches start on the 1st of every month, weekend batches on the first Saturday of every month.	**INR 34,999**
1:1 live training (online)	Max 8-10 hours, one-to-one	The same agenda, taught one-to-one by the trainer. Starts immediately, without waiting for the next batch; sessions planned around your working hours, at your pace.	**INR 99,999**
Self-paced video	1-year LMS access	All four Docker Security Training levels, plus 20+ more courses and 50+ tools, at your own pace.	**INR 833/month** billed yearly at INR 9,996
Corporate (day-wise)	2 days for this level	A private batch for your team, on demand. Foundation 1 day, Essential 2, Intermediate 3, Advanced 5 (cumulative).	**Quote on request**

ASSESSMENT AND CERTIFICATE

Your progress is checked through hands-on labs and assignments at every level. On completion you receive a DevOpsSchool certificate of completion with a unique credential ID that anyone can verify at devopsschool.com/certificates.

INCLUDED WITH EVERY LIVE BATCH

- Every live session is recorded and stays in your LMS for a year.
- Can't attend your batch? Move to next month's batch.
- Free demo class before you pay.
- Free 10-15 minute call with an advisor or the trainer to check the course fits you.

YOUR TRAINER

Learn from Rajesh Kumar

Principal Architect, trainer and mentor in DevOps, SRE, DevSecOps and platform engineering, with 20 years across 8+ software MNCs, including Staff DevOps/SRE Engineer for a leading Japanese mobile-payment platform and Principal DevOps Architect and Manager in Europe.

Profile: www.rajeshkumar.xyz · Videos: youtube.com/@TheDevOpsSchool

20 years in industry	**200+** corporate trainings
10,000+ engineers mentored	**70+** organisations coached

REVIEWS

What learners say

Rated 4.6 on Google · more reviews at devopsschool.com/testimonials and in our video testimonials.

> “Rajesh is very good trainer. Rajesh was able to resolve our queries and question effectively. We really liked the hands-on examples covered during this training program.”
>
> Indrayani, India

> “The training was very useful and interactive. Rajesh helped develop the confidence of all.”
>
> Abhinav Gupta, Pune

START YOUR DOCKER SECURITY TRAINING TRAINING

Join the next batch

Weekday batches start on the 1st of every month and weekend batches on the first Saturday of every month, with max 10 learners each. 1:1 training can start immediately; corporate batches run on demand. We reply within 1 hour.
