OUTCOMES

# What you will achieve

By the end of the Flux course path, you will be able to:

1

### Deliver with GitOps

Use Flux to keep Kubernetes clusters continuously in sync with the desired state stored in Git.

2

### Automate releases safely

Manage Helm releases, encrypted secrets, image automation and alerts across environments.

3

### Operate Flux at scale

Design multi-tenant, multi-cluster GitOps platforms with progressive delivery and governance.

WHAT THE FOUNDATION LEVEL ADDS

### GitOps concepts, Flux architecture and bootstrap

**Hands-on:** Bootstrap Flux and deploy an app. Bootstrap Flux onto a kind cluster from a GitHub or GitLab repository and deploy an application by committing manifests to Git.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Flux and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Flux on real work.
- Leads and managers who want first-hand familiarity with Flux.

BEFORE YOU START

- No prior Flux experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION

# Flux Foundation Training agenda

11 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

## DAY 1 — Foundation: GitOps concepts, Flux architecture and bootstrap

**New at this level**

1. GitOps fundamentals: declarative desired state, Git as the source of truth, pull-based reconciliation
2. What Flux is: a CNCF graduated GitOps toolkit, Flux v2 and how it compares with Argo CD
3. Flux architecture: source, kustomize, helm, notification and image automation controllers
4. Custom resources overview: GitRepository, Kustomization, HelmRepository, HelmRelease and their status
5. Prerequisites: Kubernetes cluster with kind or a managed service, kubectl and Git hosting access
6. Installing the flux CLI: package managers or install script, shell completion and flux check --pre
7. Bootstrapping Flux: flux bootstrap github or gitlab, deploy keys and the flux-system namespace
8. Repository layout: clusters, apps and infrastructure folders for a single cluster
9. First deployment: committing Kubernetes manifests and watching Flux reconcile them
10. Inspecting state: flux get all, flux get kustomizations, flux reconcile and flux suspend or resume
11. Drift correction: changing a resource by hand and watching Flux restore the desired state
