OUTCOMES

What you will achieve

By the end of the Grunt course path, you will be able to:

1

Automate front-end tasks

Use Grunt to minify, concatenate, compile, lint and optimise front-end assets automatically.

2

Build production-ready assets

Create fast, tested production builds with transpiling, cache busting and parallel tasks.

3

Integrate and extend Grunt

Run Grunt in CI and deployment pipelines, write custom plugins and plan migrations.

WHAT THE FOUNDATION LEVEL ADDS

Task runner concepts, setup and first Gruntfile

Hands-on: Write a first Gruntfile. Install Grunt in a small website project and write a Gruntfile that cleans, concatenates, minifies and copies assets into a dist folder.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Grunt and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Grunt on real work.
- Leads and managers who want first-hand familiarity with Grunt.

BEFORE YOU START

- No prior Grunt experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION

Grunt Foundation Training agenda

12 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

DAY 1 — Foundation: Task runner concepts, setup and first Gruntfile

New at this level

1. Introducing Grunt: what is Grunt, a JavaScript task runner built on Node.js and npm
2. Why use Grunt: automating repetitive front-end work, the benefits of Grunt and its plugin ecosystem
3. Real-world use cases: minification, concatenation, linting, image optimisation and deployment
4. Grunt and other tools: Gulp, npm scripts, webpack and Vite, and where Grunt still fits
5. Installation: Node.js LTS and npm, installing grunt-cli globally and grunt locally
6. Project setup: package.json, devDependencies and the structure of Gruntfile.js
7. Configuring tasks: grunt.initConfig and reading package.json with grunt.file.readJSON
8. Loading plugins: grunt.loadNpmTasks and registering a default task
9. Minification: grunt-contrib-uglify, or grunt-terser for modern JavaScript syntax
10. Concatenation: grunt-contrib-concat with banners and separators
11. Deployment basics: copying build output with grunt-contrib-copy and cleaning with grunt-contrib-clean
12. Lab and example: a first Gruntfile that concatenates and minifies a small website

You build these yourself during the course, guided by the trainer.
