

Day - 1

- **Why Vagrant?**

- What If?
- What You'll Learn

- **Test Drive Vagrant**

- Introduction
- Installing Vagrant and VirtualBox on Windows
- Installing Vagrant and VirtualBox on OS X
- Installing Vagrant and VirtualBox on Ubuntu
- Vagrant Up - Creating Your First VM
- Displaying a GUI Interface
- Sharing Files With the VM
- Suspending the VM
- Halting the VM
- Destroying the VM
- Windows Line Endings
- Additional Help
- Takeaway

- **Web Development Environment and Vagrant Fundamentals**

- Development Environment Overview
- The Vagrant file
- Installing Nginx
- Provisioning
- Networking
- Sharing and Versioning Web Site Files
- Vagrant Share
- Vagrant Status
- Sharing and Versioning Nginx Config Files
- Configuring Synced Folders
- Further Exploration

- **Creating a Hubot Environment**

- Introduction
- Boxes
- rsync
- Initialize Hubot Dev Environment
- Provision Hubot
- Scaffold a Hubot Project
- Configure rsync Synced Folders
- Run Hubot From the Shell

- **Hubot in the Cloud**

- Introduction
- Multiple Machines
- Providers
- Plugins
- Configuring an AWS AMI
- Configuring SSH to AWS and Access Keys
- Configuring rsync to AWS
- Overriding Application Configuration
- Launching Hubot Into the Cloud
- Alternative VirtualBox Option
- Development Workflow and Changing Hubot
- Release Workflow and Releasing Our Change
- Rolling Back Production
- Cleanup
- AWS Considerations
- Vagrant cygwin zwindows SSL Bug Fix
- Reflect

- **Windows Guests**

- Introduction
- Windows Guest Differences
- Finding Windows Boxes
- Creating Windows Boxes
- Vagrant Up
- Vagrant RDP
- Provision IIS
- Testing Web Deploy
- Testing Web Config Transformations
- PowerShell's Desired State Configuration
- Recap

- Integrate HipChat

- Configure Upstart Service

- Run Upstart Service

- Recap

- **Dot Local Development Databases**

- Introduction

- Provisioning Types

- Why Puppet?

- Build a Standalone MongoDB Server

- Package Our MongoDB VM Into a Vagrant Box

- Maintaining Desired State With Puppet

- Loading Data Sets

- Playing With MongoDB Replica Sets

- global-status

- Reflect
