OUTCOMES

What you will achieve

By the end of the Knative course path, you will be able to:

1

Deploy serverless on Kubernetes

Run containers as Knative Services that scale with traffic and down to zero.

2

Build event-driven systems

Connect services with Knative Eventing brokers, triggers, sources and Kafka.

3

Operate a Knative platform

Secure, observe, tune and govern Knative for production teams.

WHAT THE FOUNDATION LEVEL ADDS

Serverless concepts, installation and first Service

Hands-on: Deploy your first Knative Service. Install Knative Serving with Kourier on a local cluster, deploy a container with kn and watch it scale from zero under requests.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Knative and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Knative on real work.
- Leads and managers who want first-hand familiarity with Knative.

BEFORE YOU START

- No prior Knative experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION

Knative Foundation Training agenda

11 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

DAY 1 — Foundation: Serverless concepts, installation and first Service

New at this level

1. Serverless on Kubernetes: what Knative adds, request-driven scaling and scale to zero
2. Knative components: Serving, Eventing and Functions, and the Kubernetes CRDs behind them
3. Serving resources: Service, Configuration, Revision and Route
4. Installation options: Knative Operator vs YAML manifests, and kn quickstart on kind or minikube
5. Networking layers: choosing Kourier, Istio or Contour as the ingress for Knative Serving
6. DNS setup: Magic DNS with sslip.io, real domains and the config-domain ConfigMap
7. The kn CLI: installing kn, kn service create, list, describe, update and delete
8. First Service: deploying a container image as a Knative Service and calling its URL
9. Revisions: immutable revisions created on every change and kn revision list
10. Scale to zero in action: watching pods start on request and terminate when idle
11. Container contract: listening on $PORT, stateless design and readiness expectations

PRACTICE

Hands-on labs

You build these yourself during the course, guided by the trainer.

FOUNDATION
