OUTCOMES

What you will achieve

By the end of the Mongodb course path, you will be able to:

1

Model and query documents

Design MongoDB schemas, indexes and aggregation pipelines that fit real application access patterns.

2

Administer MongoDB reliably

Run replica sets with security, backups, monitoring and profiling in place.

3

Scale and harden clusters

Shard, tune, secure and upgrade MongoDB deployments for production workloads.

WHAT THE FOUNDATION LEVEL ADDS

Document model, installation and CRUD basics

Hands-on: Install MongoDB and query data. Launch an AWS instance, install MongoDB, connect with mongosh and Compass and load and query a product catalogue.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Mongodb and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Mongodb on real work.
- Leads and managers who want first-hand familiarity with Mongodb.

BEFORE YOU START

- No prior Mongodb experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.
