DevOpsSchool

Course curriculum · November 2026

LEVEL 03 OF 04 · INTERMEDIATE

Noops Intermediate Training

Automate recovery and remediation, secure functions with least privilege and trace failures across managed services.

LIVE ONLINE **Max 8-10 hours**	CORPORATE (DAY-WISE) **3 days · Days 1-3**	SELF-PACED VIDEO **1-year LMS access**
BATCH SIZE **Max 10 learners**	NEXT BATCHES **1st of every month · weekends: first Saturday**	CERTIFICATE **Verifiable certificate of completion**

Foundation	Essential	Intermediate	Advanced
1 day · Included	2 days · Included	3 days · This curriculum	5 days · Next step

INSIDE THIS CURRICULUM

What you will achieve	Outcomes and level focus
Who should attend	Audience and prerequisites
Agenda	35 topics · Foundation to Intermediate
Hands-on labs	3 labs
Formats and fees	Live, 1:1, self-paced, corporate
Trainer and reviews	Rajesh Kumar
Enrolment	Batches, payment, contacts

WHY DEVOPSSCHOOL

- Rated 4.6 on Google
- 1,500+ verifiable certificates issued in the public registry
- Trainer Rajesh Kumar: 20 years in industry
- Small batches: max 10 learners, every session recorded

OUTCOMES

What you will achieve

By the end of the Noops course path, you will be able to:

1

Remove manual operations work

Identify operational toil and replace it with managed services, pipelines and automated remediation.

2

Run serverless in production

Deploy, observe and troubleshoot event-driven serverless applications on the major clouds.

3

Govern automation at scale

Apply guardrails, cost controls and SLO-based operations across many teams and accounts.

WHAT THE INTERMEDIATE LEVEL ADDS

Self-healing, remediation, security and troubleshooting

Hands-on: Automate remediation for a failing service. Wire a CloudWatch alarm to an EventBridge rule that runs an automated fix, then trace a failing request end to end with OpenTelemetry.

WHO SHOULD ATTEND

- Regular Noops users who want to automate, integrate and manage it at a deeper level.
- Specialists who support Noops for colleagues or customers.
- Leads preparing Noops for wider use across projects.

BEFORE YOU START

- The Essential level, or equivalent hands-on experience.
- You can already: Build event-driven services on managed platforms, ship them through CI/CD to several environments and observe them with built-in tooling.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION TO INTERMEDIATE

Noops Intermediate Training agenda

35 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

DAY 1 — Foundation: NoOps concepts, managed platforms and first deploy

Included from Foundation

1. NoOps defined: origins, NoOps vs DevOps vs platform engineering, which operations work disappears and which remains
2. Operational toil: the SRE definition of toil, measuring manual work and choosing what to automate first
3. Building blocks: serverless functions, managed databases, PaaS, managed Kubernetes and SaaS observability
4. Shared responsibility: what AWS, Azure and Google Cloud operate for you versus what your team still owns
5. Serverless compute basics: AWS Lambda, Azure Functions and Google Cloud Run, triggers, cold starts and limits
6. Managed data services: DynamoDB, Aurora Serverless v2, Azure Cosmos DB and Firestore, and when to use each
7. Infrastructure as code for NoOps: declarative stacks with AWS SAM, OpenTofu or Terraform, and Pulumi
8. Pipelines as the only path to production: Git-based change, automated deploys and no manual console edits
9. Environment setup: cloud account, aws, az or gcloud CLI, IAM roles, budgets and billing alerts
10. First deployment: sam init, sam build and sam deploy for a function behind an HTTP endpoint
11. Limits of NoOps: vendor lock-in, cost surprises, compliance duties and debugging across managed services

DAY 2 — Essential: Everyday serverless delivery and managed operations

Included from Essential

12. Event-driven design: API Gateway, EventBridge, SQS, SNS, Pub/Sub and Event Grid as triggers
13. Serverless APIs: routing, request validation, authorizers, throttling and custom domains
14. Configuration and secrets: environment variables, SSM Parameter Store, Secrets Manager and Azure Key Vault
15. Managed containers: AWS Fargate, Google Cloud Run and Azure Container Apps for workloads that do not fit functions
16. Pipeline automation: GitHub Actions or GitLab CI building, testing and deploying serverless stacks
17. Environments: separate dev, staging and production stacks and short-lived preview stacks per pull request
18. Built-in observability: CloudWatch Logs and metrics, AWS X-Ray, Application Insights and structured JSON logs
19. Testing: unit tests with mocks, local emulation with sam local and LocalStack, integration tests in the cloud
20. Deployment safety: function versions, aliases, traffic shifting and canary or linear deploys
21. Cost basics: pay-per-use pricing, memory and duration tuning with AWS Lambda Power Tuning, cost tags
22. Static and storage hosting: S3 with CloudFront, Azure Static Web Apps and Firebase Hosting
23. Team workflow: trunk-based development, review gates and service ownership through CODEOWNERS

DAY 3 — Intermediate: Self-healing, remediation, security and troubleshooting

New at this level

24. Self-healing infrastructure: health checks, auto scaling, instance replacement and Kubernetes probes
25. Automated remediation: EventBridge rules that run Lambda functions or SSM Automation runbooks on alarms
26. Policy as code: AWS Config rules, Azure Policy and OPA or Conftest checks inside pipelines
27. GitOps for managed Kubernetes: Argo CD or Flux syncing EKS, AKS or GKE Autopilot clusters
28. Security automation: least-privilege IAM per function, IAM Access Analyzer, dependency and image scanning in CI
29. Credentials without humans: secret rotation and short-lived cloud access through OIDC federation from CI

30. Alerting that pages less: SLO-based alerts, composite alarms and routing to PagerDuty or Jira Service Management
31. Distributed tracing: OpenTelemetry instrumentation for functions and the AWS Distro for OpenTelemetry
32. Troubleshooting serverless: timeouts, throttling, concurrency limits, retries, dead-letter queues and idempotency
33. Workflow orchestration: AWS Step Functions and Azure Durable Functions with retries and compensation steps
34. Database operations without a DBA team: automated backups, point-in-time recovery and Flyway or Liquibase migrations
35. ChatOps: deploy and incident notifications in Slack or Microsoft Teams with approval actions

PRACTICE

Hands-on labs

You build these yourself during the course, guided by the trainer.

FOUNDATION

Deploy a first serverless API

Create an AWS SAM project, deploy a Lambda function behind API Gateway and call it with curl and a browser.

ESSENTIAL

Ship an event-driven app through CI/CD

Build an order-processing flow with API Gateway, SQS and Lambda, deployed by a GitHub Actions pipeline to dev and staging stacks.

INTERMEDIATE

Automate remediation for a failing service

Wire a CloudWatch alarm to an EventBridge rule that runs an automated fix, then trace a failing request end to end with OpenTelemetry.

HOW YOU CAN LEARN

Formats and fees

The same agenda in four formats. Fees are in Indian rupees as of November 2026; the course page shows them in your currency.

FORMAT	DURATION	WHAT YOU GET	FEE
Live & interactive (online)	Max 8-10 hours	Instructor-led public batch of max 10 learners with demos, labs, Q&A and assignment review. Weekday batches start on the 1st of every month, weekend batches on the first Saturday of every month.	**INR 34,999**
1:1 live training (online)	Max 8-10 hours, one-to-one	The same agenda, taught one-to-one by the trainer. Starts immediately, without waiting for the next batch; sessions planned around your working hours, at your pace.	**INR 99,999**
Self-paced video	1-year LMS access	All four Noops levels, plus 20+ more courses and 50+ tools, at your own pace.	**INR 833/month** billed yearly at INR 9,996
Corporate (day-wise)	3 days for this level	A private batch for your team, on demand. Foundation 1 day, Essential 2, Intermediate 3, Advanced 5 (cumulative).	**Quote on request**

ASSESSMENT AND CERTIFICATE

Your progress is checked through hands-on labs and assignments at every level. On completion you receive a DevOpsSchool certificate of completion with a unique credential ID that anyone can verify at devopsschool.com/certificates.

INCLUDED WITH EVERY LIVE BATCH

- Every live session is recorded and stays in your LMS for a year.
- Can't attend your batch? Move to next month's batch.
- Free demo class before you pay.
- Free 10-15 minute call with an advisor or the trainer to check the course fits you.

YOUR TRAINER

Learn from Rajesh Kumar

Principal Architect, trainer and mentor in DevOps, SRE, DevSecOps and platform engineering, with 20 years across 8+ software MNCs, including Staff DevOps/SRE Engineer for a leading Japanese mobile-payment platform and Principal DevOps Architect and Manager in Europe.

Profile: www.rajeshkumar.xyz · Videos: youtube.com/@TheDevOpsSchool

20 years in industry	**200+** corporate trainings
10,000+ engineers mentored	**70+** organisations coached

REVIEWS

What learners say

Rated 4.6 on Google · more reviews at devopsschool.com/testimonials and in our video testimonials.

> “Rajesh is very good trainer. Rajesh was able to resolve our queries and question effectively. We really liked the hands-on examples covered during this training program.”
>
> Indrayani, India

> “The training was very useful and interactive. Rajesh helped develop the confidence of all.”
>
> Abhinav Gupta, Pune

START YOUR NOOPS TRAINING

Join the next batch

Weekday batches start on the 1st of every month and weekend batches on the first Saturday of every month, with max 10 learners each. 1:1 training can start immediately; corporate batches run on demand. We reply within 1 hour.
