OUTCOMES

What you will achieve

By the end of the Redis course path, you will be able to:

1

Model data in Redis

Choose and use the right Redis data types for caching, queues, leaderboards and analytics.

2

Run Redis reliably

Configure persistence, replication, Sentinel, ACLs and TLS, and troubleshoot production instances.

3

Scale Redis platforms

Operate Redis Cluster on servers, Kubernetes or managed clouds for high-traffic and AI workloads.

WHAT THE FOUNDATION LEVEL ADDS

Redis concepts, installation and core data types

Hands-on: Build a leaderboard and session store. Install Redis, store user sessions in hashes with TTLs, and build a real-time leaderboard with sorted sets using redis-cli and Redis Insight.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Redis and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Redis on real work.
- Leads and managers who want first-hand familiarity with Redis.

BEFORE YOU START

- No prior Redis experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION

Redis Foundation Training agenda

11 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

DAY 1 — Foundation: Redis concepts, installation and core data types

New at this level

1. In-memory data stores: what Redis is, single-threaded event loop, and use cases such as caching, sessions and leaderboards
2. Redis today: Redis 8 Open Source and its licences, Redis Software and Cloud, and the Valkey community fork
3. Installation: apt and dnf packages, the official Docker image, redis.conf basics and starting the server
4. redis-cli: connecting, PING, INFO, SELECT, HELP and running commands interactively and from scripts
5. Keys: naming conventions, EXISTS, DEL, TYPE, RENAME, and why SCAN replaces KEYS in production
6. Expiration: EXPIRE, TTL, PERSIST, SET with EX and NX, and how keys are evicted on expiry
7. Strings: SET, GET, INCR, DECR, APPEND, MSET and atomic counters
8. Lists: LPUSH, RPUSH, LPOP, LRANGE, LTRIM and blocking BLPOP for simple queues
9. Hashes: HSET, HGET, HGETALL, HINCRBY and modelling objects
10. Sets and sorted sets: SADD, SINTER, SUNION, ZADD, ZRANGE, ZRANK and leaderboards
11. Redis Insight: browsing keys, running commands and profiling from the GUI

Hands-on labs

You build these yourself during the course, guided by the trainer.
