OUTCOMES

What you will achieve

By the end of the Rpm course path, you will be able to:

1

Manage RPM packages confidently

Install, query, verify and troubleshoot packages on RHEL, Fedora and other RPM-based systems.

2

Build quality RPM packages

Write spec files and build, lint and test RPMs with rpmbuild and mock.

3

Distribute software securely

Sign packages, publish repositories and automate RPM builds in CI pipelines.

WHAT THE FOUNDATION LEVEL ADDS

RPM concepts and everyday package commands

Hands-on: Manage packages on a RHEL-family host. Install, query, upgrade, freshen and remove packages on Rocky Linux, AlmaLinux or RHEL, then detect a modified file with rpm -V.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Rpm and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Rpm on real work.
- Leads and managers who want first-hand familiarity with Rpm.

BEFORE YOU START

- No prior Rpm experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION

Rpm Foundation Training agenda

11 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

DAY 1 — Foundation: RPM concepts and everyday package commands

New at this level

1. Using RPM: what an RPM package is, header, payload and the RPM database, and RPM-based distributions
2. Package naming: name, version, release, architecture, epoch and noarch packages
3. rpm vs dnf: low-level package operations vs dependency-resolving repository tools, and zypper on SUSE
4. Finding RPM packages: dnf search, dnf info, repositories and vendor download sites
5. Installing: rpm -ivh, dnf install for local and repository packages and dependency resolution
6. Uninstalling: rpm -e, dnf remove and handling dependent packages
7. Upgrading: rpm -Uvh vs dnf upgrade, and when to use each
8. Freshening: rpm -Fvh to upgrade only packages that are already installed
9. Querying: rpm -q, -qa, -qi, -ql, -qf, -qR and --whatprovides
10. Custom queries: --queryformat output, listing configuration and documentation files
11. Verifying: rpm -V output flags for size, mode, checksum and ownership changes

You build these yourself during the course, guided by the trainer.
