OUTCOMES

What you will achieve

By the end of the Sonatype course path, you will be able to:

1

Manage artifacts centrally

Run Nexus Repository as the single, secured source for Maven, npm, PyPI, NuGet and Docker artifacts.

2

Enforce open source policy

Use Sonatype Lifecycle to catch vulnerable and non-compliant components in every pipeline.

3

Secure the supply chain

Block malicious packages, produce SBOMs and operate the platform at enterprise scale.

WHAT THE FOUNDATION LEVEL ADDS

Software supply chain and Nexus Repository basics

Hands-on: Run Nexus as your Maven proxy. Install Nexus Repository in Docker, create proxy, hosted and group Maven repositories and build a project that resolves and deploys through Nexus.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Sonatype and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Sonatype on real work.
- Leads and managers who want first-hand familiarity with Sonatype.

BEFORE YOU START

- No prior Sonatype experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION

Sonatype Foundation Training agenda

10 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

DAY 1 **Foundation: Software supply chain and Nexus Repository basics** — **New at this level**

1. Software supply chain basics: open source dependencies, transitive risk, malicious packages and SBOMs
2. Sonatype platform overview: Nexus Repository, Sonatype Lifecycle, Repository Firewall and SBOM Manager
3. Artifact repository concepts: hosted, proxy and group repositories and why builds need a single source
4. Nexus Repository editions: Community Edition and Pro and the features each provides
5. Installation: system requirements, Java runtime, the nexus.properties file and running as a service or in Docker
6. First login: admin password, anonymous access settings and the repository administration screens
7. Blob stores: file blob stores, S3 and Azure blob stores and assigning them to repositories
8. Maven repositories: proxying Maven Central, hosted releases and snapshots and a maven-public group
9. Client setup: Maven settings.xml mirrors and credentials pointing builds at Nexus
10. Browsing and searching components: assets, versions, metadata and download statistics

PRACTICE

Hands-on labs

You build these yourself during the course, guided by the trainer.

FOUNDATION

Run Nexus as your Maven proxy

Install Nexus Repository in Docker, create proxy, hosted and group Maven repositories and build a project that resolves and deploys through Nexus.

HOW YOU CAN LEARN

Formats and fees

The same agenda in four formats. Fees are in Indian rupees as of November 2026; the course page shows them in your currency.

FORMAT	DURATION	WHAT YOU GET	FEE
