OUTCOMES

What you will achieve

By the end of the Spinnaker course path, you will be able to:

1

Automate cloud deployments

Build Spinnaker pipelines that deploy to Kubernetes and AWS from triggers and versioned artifacts.

2

Release with less risk

Use blue/green, canary analysis, approvals and automatic rollbacks for safer releases.

3

Operate Spinnaker at scale

Secure, scale, monitor and govern Spinnaker as a shared delivery platform.

WHAT THE FOUNDATION LEVEL ADDS

Spinnaker concepts, architecture and installation

Hands-on: Install Spinnaker and deploy once. Install Spinnaker on a lab Kubernetes cluster with MinIO storage, create an application and deploy an nginx manifest through a one-stage pipeline.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Spinnaker and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Spinnaker on real work.
- Leads and managers who want first-hand familiarity with Spinnaker.

BEFORE YOU START

- No prior Spinnaker experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION

Spinnaker Foundation Training agenda

11 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

2. Spinnaker overview: applications, pipelines, stages, server groups, clusters and load balancers
3. Spinnaker architecture: Deck, Gate, Orca, Clouddriver, Front50, Rosco, Igor, Echo, Fiat and Kayenta
4. Prerequisites: Linux command line, familiarity with cloud computing, Docker and kubectl basics
5. What is Kubernetes: pods, deployments, services and namespaces as Spinnaker deployment targets
6. Kubernetes cluster installation: a lab cluster with kind, minikube or a managed Kubernetes service
7. Spinnaker installation: Halyard or the Spinnaker Operator, persistent storage (S3, GCS or MinIO) and versions
8. Installation troubleshooting: pod status, service logs and common configuration errors
9. Navigating Spinnaker: the Deck UI, applications view, clusters, infrastructure and pipeline views
10. Careers in Spinnaker: release engineering and platform engineering roles that run Spinnaker
11. First deployment: create an application and deploy a manifest through a simple pipeline
