OUTCOMES

What you will achieve

By the end of the Stash course path, you will be able to:

1

Build Logstash pipelines

Collect, parse and enrich logs with input, filter, output and codec plugins.

2

Run pipelines reliably

Use persistent and dead letter queues, multiple pipelines, security and monitoring APIs.

3

Operate at production scale

Tune performance, scale horizontally and upgrade Logstash safely.

WHAT THE FOUNDATION LEVEL ADDS

Logstash concepts, installation and first pipeline

Hands-on: Run a first Logstash pipeline. Install Logstash, run a stdin to stdout pipeline, then read an Apache access log file and print structured events with the rubydebug codec.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Stash and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Stash on real work.
- Leads and managers who want first-hand familiarity with Stash.

BEFORE YOU START

- No prior Stash experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION

Stash Foundation Training agenda

10 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

DAY 1 — Foundation: Logstash concepts, installation and first pipeline

New at this level

1. Logstash introduction: what Logstash is and its role in the Elastic Stack next to Beats and Elastic Agent
2. How Logstash works: inputs, filters and outputs, events, the pipeline workers and in-memory queue
3. Use cases: log collection, parsing, enrichment and routing data to Elasticsearch and other stores
4. Getting started with Logstash: Java bundled JDK, versions and compatibility with Elasticsearch
5. Setting up and running Logstash: apt, yum, tar archive and Docker installs and running as a service
6. Directory layout: settings, conf.d, logs, data and plugin locations
7. Settings files: logstash.yml, pipelines.yml, jvm.options and log4j2.properties
8. First pipeline: stdin to stdout with the -e flag and the rubydebug codec
9. Pipeline configuration files: structure of input, filter and output sections
10. Checking configuration: --config.test_and_exit and automatic config reload

PRACTICE

Hands-on labs

You build these yourself during the course, guided by the trainer.
