DAY 1 **Foundation: Azure DevOps Server builds, agents and first pipelines** — New at this level

2. Azure DevOps Server 2022: the on-premises successor to Team Foundation Server and its services
3. Architecture: application tier, SQL Server data tier, project collections and projects
4. Pipelines overview: classic build pipelines vs YAML pipelines and where Team Build fits today
5. Agents and agent pools: self-hosted agents, collection pools, project queues and agent capabilities
6. Installing a build agent: downloading the agent, config.cmd or config.sh, PAT authentication, running as a service
7. Source control options: Git repositories and TFVC and connecting a pipeline to a repository
8. First classic pipeline: build a .NET solution with the .NET Core or Visual Studio Build tasks
9. First YAML pipeline: azure-pipelines.yml with trigger, pool and steps
10. Build results: logs, the Tests tab, published artifacts and status badges
