OUTCOMES

What you will achieve

By the end of the Udeploy course path, you will be able to:

1

Automate application deployments

Build components, processes and applications that deploy consistently to every environment.

2

Govern every release

Use snapshots, approvals, gates, schedules and notifications to control promotions.

3

Run uDeploy securely

Administer agents, resources, security, CLI automation and plug-ins for many teams.

WHAT THE FOUNDATION LEVEL ADDS

UDeploy overview, object model and setup

Hands-on: Deploy a first component with uDeploy. Install a uDeploy server and agent, create a component with a version from the file system and deploy it to a test resource with a simple process.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Udeploy and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Udeploy on real work.
- Leads and managers who want first-hand familiarity with Udeploy.

BEFORE YOU START

3. Server and agents: server roles, agent communication, agent relays and supported platforms
4. Installation: server prerequisites, database choice, agent installation and first console login
5. Components: creating a component and choosing a source for its versions
6. Inventory: what inventory records and how it shows what is deployed where
7. Component processes 1: designing a first process with download, configure and start steps
8. Resources and agents basics: mapping a component to an agent in the resource tree
9. First deployment: running a component process against a test environment
