

Day - 1

- **Introduction to Velero**
 - Overview of Velero
 - Features and benefits of Velero
 - Use cases for Velero
- **Velero Installation and Configuration**
 - Installing Velero on Kubernetes cluster
 - Configuring Velero components
 - Setting up backup storage
- **Velero Backup Operations**
 - Creating and managing backups
 - Configuring backup schedules
 - Using backup labels and selectors
- **Velero Restore Operations**
 - Understanding restore operations
 - Restoring from a backup
 - Validating restored resources

Day - 2

- **Velero Advanced Topics**
 - Using hooks to customize backup and restore operations
 - Configuring backup and restore retention policies
 - Using Velero plugins
- **Velero Backup and Restore Best Practices**
 - Understanding backup and restore strategies
 - Designing a backup and recovery plan
 - Implementing best practices for backup and recovery
- **Disaster Recovery with Velero**
 - Designing and implementing a disaster recovery plan with Velero
 - Performing disaster recovery tests and drills
- **Velero Troubleshooting and Support**
 - Troubleshooting common Velero issues
 - Debugging backup and restore errors
 - Getting support for Velero
