OUTCOMES

What you will achieve

By the end of the Vitess course path, you will be able to:

1

Scale MySQL horizontally

Design keyspaces, VSchemas and vindexes to shard MySQL with Vitess.

2

Operate Vitess clusters

Run failover, online schema changes, backups and monitoring for production Vitess.

3

Migrate without downtime

Move and reshard data with VReplication workflows and verify it with VDiff.

WHAT THE FOUNDATION LEVEL ADDS

MySQL scaling concepts, Vitess architecture and local cluster

Hands-on: Run a local Vitess cluster. Start a local Vitess cluster with an unsharded keyspace, connect with the MySQL client through VTGate and inspect tablets with vtctldclient and VTAdmin.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Vitess and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Vitess on real work.
- Leads and managers who want first-hand familiarity with Vitess.

BEFORE YOU START

- No prior Vitess experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION

Vitess Foundation Training agenda

11 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

DAY 1 — Foundation: MySQL scaling concepts, Vitess architecture and local cluster

New at this level

1. Scaling MySQL: vertical limits, read replicas, manual sharding and where Vitess fits
2. What Vitess is: a CNCF graduated database clustering system for horizontal scaling of MySQL
3. Architecture: VTGate, VTTablet, MySQL instances, topology service, vtctld and VTOrc
4. Keyspaces and shards: logical databases, key ranges and unsharded versus sharded keyspaces
5. Tablet types: primary, replica and rdonly tablets and how traffic is routed to them
6. Topology service: etcd, ZooKeeper or Consul as the cluster metadata store
7. Local install: Vitess binaries and the local example scripts with etcd
8. Connecting applications: the MySQL protocol through VTGate and tablet type targeting
9. First queries: creating a schema, inserting and selecting data through VTGate
10. Admin tools: vtctldclient commands and the VTAdmin web interface
11. MySQL compatibility: supported SQL features and known limitations
