OUTCOMES

What you will achieve

By the end of the Zabbix course path, you will be able to:

1

Monitor infrastructure end to end

Collect metrics from servers, networks, logs and web applications with agents, SNMP and agentless checks.

2

Alert and respond effectively

Design triggers, escalations, remote commands and SLA reporting that reduce noise and downtime.

3

Run Zabbix at scale

Automate discovery, use proxies and HA, secure and tune Zabbix for large environments.

WHAT THE FOUNDATION LEVEL ADDS

Zabbix architecture, installation and first checks

Hands-on: Install Zabbix and monitor a server. Install Zabbix server, frontend and PostgreSQL, add a Linux host with Zabbix agent 2 and create a CPU trigger with hysteresis and a dependency.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to Zabbix and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use Zabbix on real work.
- Leads and managers who want first-hand familiarity with Zabbix.

BEFORE YOU START

- No prior Zabbix experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION

Zabbix Foundation Training agenda

11 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

DAY 1 — Foundation: Zabbix architecture, installation and first checks

New at this level

1. History of Zabbix: origins, open source licence, LTS and standard release lines
2. Zabbix architecture and functionality: server, database, web frontend, agents and proxies
3. Server, web interface and agent installation: packages, database setup and Zabbix agent 2
4. Initial Zabbix configuration: zabbix_server.conf, zabbix_agentd.conf and first frontend login
5. Zabbix definitions: hosts, host groups, items, triggers, events, problems and actions
6. Zabbix web interface overview: dashboards, Monitoring, Data collection, Alerts and Administration menus
7. Data collection: creating hosts and Zabbix agent passive and active checks
8. Data visualisation: simple graphs, latest data and overview
9. Problem detection: trigger expressions, severities and less sensitive triggers with hysteresis
10. Trigger dependencies: suppressing alert storms when an upstream device fails
11. Housekeeping basics: history versus trends and how long data is kept
