OUTCOMES

What you will achieve

By the end of the OWASP ZAP course path, you will be able to:

1

Find web vulnerabilities

Use ZAP's proxy, spiders, passive and active scans and manual tools to find and confirm vulnerabilities.

2

Automate security testing

Run authenticated web and API scans automatically in CI/CD with clear quality gates.

3

Run a DAST programme

Scale, govern and report dynamic testing across many applications and teams.

WHAT THE FOUNDATION LEVEL ADDS

DAST concepts, ZAP installation and first scan

Hands-on: Run a first scan on Juice Shop. Run OWASP Juice Shop in Docker, explore it through the ZAP proxy, run an automated scan and produce an HTML report of the findings.

WHO SHOULD ATTEND

- Beginners and working professionals who are new to OWASP ZAP and want a solid, hands-on start.
- Engineers, analysts, testers and students preparing to use OWASP ZAP on real work.
- Leads and managers who want first-hand familiarity with OWASP ZAP.

BEFORE YOU START

- No prior OWASP ZAP experience is needed.
- Basic computer skills and a laptop with a stable internet connection for the live sessions and labs.
- This curriculum includes every earlier level, so it is complete on its own.

AGENDA · FOUNDATION

OWASP ZAP Foundation Training agenda

11 topics. Each level builds on the one before it, so this curriculum lists every earlier level in full. Days are for corporate (day-wise) delivery; live online batches cover the same agenda in max 8-10 hours.

DAY 1 — Foundation: DAST concepts, ZAP installation and first scan

New at this level

1. Dynamic application security testing: how DAST differs from SAST and SCA and where it fits in the SDLC
2. ZAP overview: the open source web app scanner, its history from OWASP and current stewardship
3. Rules of engagement: scanning only authorised targets and using safe test applications such as OWASP Juice Shop
4. Installation: desktop installers for Windows, macOS and Linux, Java requirements and Docker images
5. Desktop UI tour: sites tree, history, alerts, output tabs and the request and response panes
6. Intercepting proxy: local proxy settings, the ZAP root CA certificate and launching a proxied browser
7. Manual explore: browsing an application through ZAP to populate the sites tree
8. Automated scan: Quick Start against a URL and what happens during the scan
9. Alerts: risk and confidence levels, evidence, CWE and WASC references and solutions
10. Common findings: missing security headers, cookie flags, XSS and SQL injection indicators
11. First report: generating an HTML report and reading it with developers
